

NEW PRODUCT RELEASE (2006-19)

Holley Shiny Supercharger HP Carburetors

PRODUCT DESCRIPTION ▼

Holley is proud to announce the availability of their Shiny Supercharger HP carburetors, P/N 0-80575S 600CFM, 0-80576S 750CFM, and 0-80577S 950CFM. The Supercharger HP uses the best features from the race bred 4150 HP carb, but are calibrated for use on roots style superchargers.

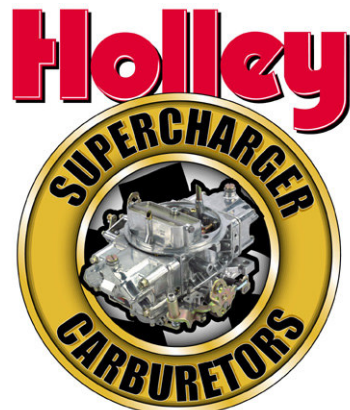

The Supercharger HP features the contoured main body from the 4150 HP and adds a tumble polishing for a shiny finish. The Supercharger HP has a unique capability that allows the power valves to reference the intake manifold vacuum below the supercharger. This allows the power valve to operate as it should, based off intake manifold vacuum. A power valve provides further enrichment to the main metering system under load (low vacuum) conditions. Without this external referencing, the power valve would be "reading" the boost pressure, which has no bearing on the engine load.

Other features include: mechanical secondaries, non-stick gaskets, adjustable air bleeds, and a four corner idle system.

KEY FEATURES AND BENEFITS ▼

- Specifically Designed for use on Roots Style Blown Engines
- 100% Wet-flow Tested and Calibrated
- Model 4150HP Manifold Referenced Power Valve
- Four-corner Idle System
- Replaceable Air Bleeds
- Dual Metering Blocks
- Shiny Finish
- Dual Feed Fuel Inlets
- Center Hung Float Bowls

AVAILABLE: ON THE SHELF
