

HIGH-FLOW INTAKE SYSTEMS

**+7.92 hp**

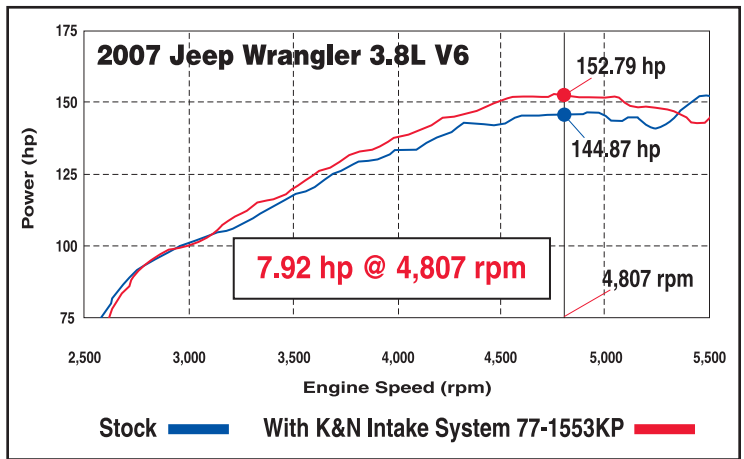

**K&N High-Flow Intake System  
Adds 7.92 Horsepower to  
2007 Jeep Wrangler**

The K&N High-Flow Intake System for the 2007 Jeep Wrangler 3.8L V6, (part no. 77-1553KP), increases horsepower by 7.92 hp at 4807 rpm over the Wrangler's stock configuration. To achieve more horsepower, K&N replaces the Wrangler's original intake assembly; including the air box, air filter and intake tube with an all-new intake design. The new system draws air through a K&N High-Flow Air Filter that increases airflow and filtering capacity and never needs to be replaced. Protecting the large cone-shaped air filter and isolating it from engine heat, is a powder coated steel heat shield that replaces the Wrangler's stock air box. As it passes the filter, air travels through a larger diameter aluminum tube that is formed and shaped, in the design phase, to drive a more laminar flow of air to the Wrangler's 3.8L V6 engine.

#77-1553KP

Easy to install, the 77-1553KP is currently available where quality performance is sold at an MSRP of \$450 and is backed by the same K&N Million Mile Limited Warranty® as all K&N OE Replacement Air Filters.
