

+17.48 hp

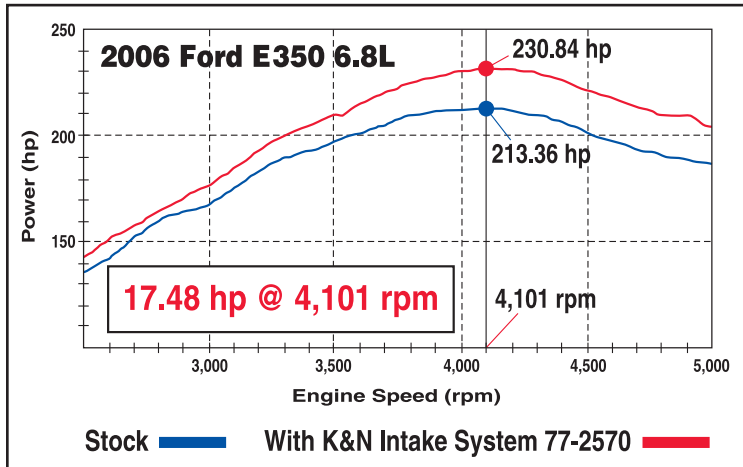

Ford 6.8L V-10 E350 and E450 Gets 17.48 More Horsepower with K&N High-Flow Intake System

The K&N High-Flow Intake System for the 1998-2006 Ford 6.8L V10 E350 and E450 motor, (part no. 77-2570KTK), increases horsepower by 17.48 hp at 4101 rpm over the stock engine configuration. To achieve more horsepower, K&N replaces the original intake assembly; including the air box, air filter and intake tube with a new intake design. The new system draws air through a K&N High-Flow Air Filter that increases airflow and filtering capacity, and never needs to be replaced. Protecting the chrome top cone-shaped air filter, and isolating it from engine heat, is a powder coated steel heat shield that replaces the stock air box. As it passes the filter, air travels through a large diameter powder coated K&N Metal Intake Tube that is shaped and angled to drive a more laminar flow of air to the big V10 engine.

#77-2570KTK

The 77-2570KTK is currently available where quality performance is sold, is backed by the same K&N Million Mile Limited Warranty® as all K&N OE Replacement Air Filters and has an MSRP of \$549.

Part#	Application	Available	MSRP
77-2570KTK*	1998-2006 Ford E350/E450 6.8L V10	Currently Available	\$549.00
